Exterior Side/Rear Cameras

Active Management Oversight To Enforce NO Driving While Texting
Direct CMS Operator oversight of transport activities for verification of driver performance in a professional manor.
Federal DOT compliance of Distracted Driver regulations, make the prevention of Driving While Texting a priority in your fleet.

Active Management Safety Alerts Of Dangerous Driving Behaviors
Drivers who exhibit dangerous driving behaviors are more likely to cause accidents. Safety settings in the DVR programming can alert both the driver and the CMS operator that the driver has exceeded a safe driving parameter. The presence of monitoring surveillance systems with active safety alerts can keep drivers conscious their actions may have employment endangering repercussions.

Active Virtual Chaperone To Reduce Manpower Cost & Maintain Driver Alertness
CMS Operator ability to accompany solo drivers on long tedious or high-risk transports, to verify they stay consciously focused. This is a cost saving aspect in transports where 2 employees are sent but only one needed to operate the vehicle, so a Virtual Chaperone can help take the place of several assistants at a lower cost by actively monitoring many solo drivers from a single CMS Operator site.

⚠️ Stop Dangerous Driving via **Live View** Trip Supervision* ⚠️
